

METASPLOITABLE 2 — Vulnerability Assessment & Attack Surface Analysis

Assessment Type: Vulnerability Assessment / Attack Surface Review

Target: 192.168.56.101

Executive Summary

Evaluación integral de seguridad orientada a discovery de servicios, profiling del activo, vulnerability discovery y análisis de superficie de ataque. El assessment confirmó servicios legacy, vulnerabilidades conocidas y configuraciones inseguras.

Risk Matrix — Executive Overview

Finding	Service	Likelihood	Impact	Risk
vsFTPD Backdoor CVE-2011-2523P	FTP	High	Critical	CRITICAL
Anonymous FTP Login	FTP	High	High	HIGH
Telnet Enabled	Telnet	High	High	HIGH
Apache Slowloris Exposure	Apache HTTP	Medium	High	HIGH
SMB Weak Configuration	SMB	High	High	HIGH
Java RMI Exposure	Java RMI	Medium	High	HIGH
Weak TLS / POODLE / LOGJAM	TLS	Medium	Medium	MEDIUM

Resumen Ejecutivo de Riesgo: 1 CRITICAL, 5 HIGH, 1 MEDIUM. El activo presenta una superficie de ataque elevada y múltiples servicios históricamente explotables.

Methodology

Asset profiling mediante Nmap, vulnerability discovery con NSE scripts, attack surface mapping y risk classification.

Asset Profile

Servicios identificados: FTP, SSH, Telnet, Apache, SMB, Java RMI, MySQL, PostgreSQL, Tomcat, RPC y servicios legacy.

Key Findings

vsFTPD vulnerable, anonymous FTP, Telnet enabled, Apache Slowloris exposure, SMB weak configuration, weak TLS y Java RMI exposure.

Remediation Roadmap

Eliminar servicios legacy críticos, deshabilitar Telnet, fortalecer SMB, actualizar componentes vulnerables y modernizar TLS.

Portfolio Correlation

Relaciona Hydra Telnet Bruteforce, Apache DoS Analysis y SMB Enumeration Analysis.

Conclusion

Assessment orientado a Vulnerability Management, Security Operations y análisis profesional de riesgos.
